Code Examples

/calendars

The Calendars call returns the Exception Combination IDs for the given dates within a period of time in the current active pick period. This allows you to see if there are any trip variations on a given day.

Parameters:

calendarstartdate (optional) - The start date for determining the period to look at in yyyymmdd format
calendarenddate (optional) - The end date for determining the period to look at in yyyymmdd format
exccomboid (optional) - An exception combination id to look for

Response:

Calendar
